

TRINITY

Segmental Block Wall System

Trinity provides contractors and engineers with an economical solution to their need for efficient retaining wall block. Excelling in tactical design and efficient installation, Trinity has proven to be the preferred choice amongst others in the market.

WHY TRINITY?

- Pinless system
- Flat base for quick leveling
- Vertically aligned cores allow for easy stone filling
- Various face options available
- More than 3 million square feet installed
- Rear hand holds for lifting

TRINITY'S DESIGN ADVANTAGE

- 3 piece look with 1 square foot units
- Top nodes create a 2-degree set-back (1/4" per course)
- Vertically aligned cores allow for easy stone filling

Trinity is designed to create a MSE (Mechanically Stabilized Earth) structure using conventional geogrid. A popular feature of this system is the lack of required pins and clips, which brings ease to the block's installation. Also, the ability to easily knock off the side pieces allows for tight radii and batter/running bond adjustments.
